

ABSTRACT

The present invention provides a golf practice cage with a central location. The central location is designed to collect golf balls and may comprise a bucket or bag. The golf practice cage comprises a frame with an enclosure substantially surrounding the frame. The enclosure has a back portion with a fold extending in front of the back portion to form a pocket to catch golf balls and funnel them towards the central location. Alternatively to the fold, a base net may reside within an area defined by the frame and the enclosure. The base net funnels caught balls to the central location.
